1824. neers, and which accompany this report, give a minute and detailed exposition of the subject referred to the committee, and to these the attention of the house is respectfully invited.

"The canal contemplated by the bill, which has been referred to the committee, is to run along the margin of Niagara river, and in some places to be made by constructing a wall or pier in the river, near shore. It would interfere with the present mode of towing vessels up the river with oxen, and would occupy the shore where it is now contemplated to construct a tow path, on the east side of the basin at Black Rock. The expense of this independent canal is variously estimated, at from 35 to 100,000 dollars. A survey and description of this route by Mr. Bates, the engineer, is among the documents furnished. The citizens of Buffalo offer to contract for the canal proposed by the bill, for 35,000 dollars.

"The overland canal would not essentially interfere with the constructions contemplated by the canal commissioners; and it is submitted to the legislature, whether its construction, at this time, is expedient and necessary."

On the 25th March, under a resolution of the 5th of February, the Canal Commissioners reported to the Assembly the names of the engineers, agents, &c. on the canals, the monies paid, &c. as follows:

Under a resolution of the 5th of Feb. Messrs. Young, Bouck and Seymour, canal commissioners, on the 28th of March following made reports: the first "that he had never, within his recollection, issued his note to any contractor, for any purpose connected with his accounts or expenditures on the canal:" The second, "that he had not in any instance whatever, given his note, in his private or official capacity, 'to contractors, for work done on the canal:" and the last, "that although he had not been in the habit of issuing his notes or due bills in payment to canal contractors, he had occasionally, when destitute of funds, found it expedient, for the purpose of accommodating the contractors, of closing their accounts, and discharging them from their contracts, to give his due bills for the balance, payable on the first receipt of public money. He does not, however, recollect of more than one instance of this kind, during the last year. In the course of the year previous, a number were issued. The amount of them, and to whom they were given, it was not in his power to state; but as they were all paid a long time since, and were given for the above mentioned purposes solely, he trusts the object of the inquiries embraced in the resolution, is substantially answered by the information now communicated."
